HIGHLIGHTS California's seasonally adjusted unemployment rate for September was 6.4 percent, down from 6.6 percent in August 1986. A year ago, in September 1985, the rate was 7.3 percent. During September in California, seasonally adjusted employment increased by 119,000 to 12,570,000 while during the same period unemployment decreased by 23,000 to 860,000. The United States' civilian seasonally adjusted unemployment rate in September 1986 was 7.0 percent compared to 7.1 percent in September 1985.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 129,900 from August 1986 to September 1986. All major sectors of the California economy, excluding mining, reported employment growth during September. The largest increase in employment occurred in education as teachers and school employees returned to work. Employment in wholesale and retail trade expanded by 19,300 over the month. The services sector added 16,300 new jobs and employment in construction increased by 6,600. Since September 1985, total nonagricultural wage and salary employment has expanded by 218,100 which represents a 2.0 percent increase over the year.

Prepared in cocperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Economic Analysis Group, 800 Capitol Mall, Sacramento, CA 95814.

HIGHLIGHTS California's seasonally adjusted unemployment rate for October was 6.6 percent, up from the 6.4 percent in September 1986. A year ago, in October 1985, the rate was 7.6 percent. During October in California, seasonally adjusted employment decreased by 33,000 over the month while unemployment increased by 27,000. However, the number of job losers decreased from 407,500 in September to 393,000 in October. The number of job leavers increased by 23,400 during the month. The national civilian seasonally adjusted unemployment rate for October 1986 was 7.0 percent, the same rate as September 1986.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 38,700 from 11,305,400 in September 1986 to 11,344,100 in October 1986. The largest increase in employment was in the government sector as schools continue to report new hires with the start of the fall semester. The largest decrease in jobs occurred in manufacturing because of the normal seasonal layoffs in the canning industry. Because of the continuing dry weather, employment in the construction industry declined less than seasonally expected. Since October 1985, total wage and salary employment has increased by 225,800--a gain of 2.0 percent over the year.

HIGHLIGHTS California's seasonally adjusted unemployment rate for November was 6.8 percent, up from the 6.6 percent in October 1986. A year ago, in November 1985, the rate was 6.9 percent. During November in California, seasonally adjusted employment increased by 21,000 over the previous month while unemployment increased by 31,000. The number of job losers increased from 393,000 in October to 431,800 in November, while the number of job leavers decreased by 28,600 during the month. The national civilian seasonally adjusted unemployment rate for November 1986 was 7.0 percent, the same rate as one month and one year earlier.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 36,600 from 11,358,400 in October of 1986 to 11,395,000 in November of 1986. Between October and November of this year retail trade added 30,300 new jobs. Total employment in the construction industry decreased by 4,800 while the manufacturing sector reported that employment was down by 4,200. Since November of 1985, total nonagricultural employment has increased by 267,100. This represents a growth rate of 2.4 percent during the last twelve months. During October of 1986, average weekly earnings in manufacturing were $413.43.

HIGHLIGHTS California's seasonally adjusted unemployment rate for December was 6.7 percent, down from the 6.8 percent in November 1986. A year ago, in December 1985, the rate was also 6.7 percent. During December in California, seasonally adjusted employment decreased by 91,000 over the month while unemployment declined by 17,000. The number of job losers rose from 431,800 in November to 447,700 in December. The number of job leavers fell slightly during the month. The national seasonally adjusted civilian unemployment rate for December 1986 was 6.7 percent, down 0.2 percent from the month earlier.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 53,400 from 11,402,700 in November 1986 to 11,456,100 in December 1986. The largest gains in employment were in the trade sector as retail stores added staff for the holiday season. The largest decrease in jobs occurred in state and local government as schools reduced employment during the holidays. Because of the continuing dry weather, employment in the construction industry declined less than seasonally expected. Since December 1985, total wage-and-salary employment has increased by 289,900 - a gain of 2.4 percent over the year. Average weekly earnings in manufacturing were approximately $425.00 during December 1986. (Figures 8-11)

HIGHLIGHTS California's seasonally adjusted unemployment rate for January 1987 was 6.2 percent, down from 6.7 percent in December 1986. In January 1986, the rate was 5.9 percent. During January in California, seasonally adjusted employment decreased slightly by 1,000 over the month while unemployment decreased by 72,000. The national civilian seasonally adjusted unemployment rate for January 1987 was 6.7 percent, the same rate as the prior month and down 0.1 percent from a year earlier.

In January, total nonagricultural wage and salary employment, not seasonally adjusted, decreased to 11,343,800, down 182,200 from the prior month. The largest gains in employment occurred in the health and personal services industries; however, job losses in other service industries resulted in a substantial decrease in employment totals for this sector. All other industry sectors experienced job losses led by construction and manufacturing as wet weather caused layoffs. Since January 1986, total wage and salary employment has increased by 321,900 -- a gain of 2.9 percent over the year. Average weekly earnings in manufacturing were approximately $432 during December 1986.

HIGHLIGHTS The numbers in this report reflect the most recent population and seasonal adjustments.

California's seasonally adjusted unemployment rate for February was 6.2 percent, the same as the rate in January 1987. A year ago, in February 1986, the rate was 7.2 percent. During February in California, seasonally adjusted employment increased by 211,000 over the month while unemployment increased by 12,000. The national civilian seasonally adjusted unemployment rate for February 1987 was 6.7 percent, the same rate as the prior two months.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 33,100 from 11,381,800 in January 1987 to 11,414,900 in February 1987. The largest gains in employment were in the services sector and in education. The largest loss of jobs occurred in retail trade, but the decrease was less then seasonally expected. Because of the continuing dry weather, employment in the construction industry increased by 3,700. Since February 1986, total wage and salary employment has increased by 373,200 -- a gain of 3.4 percent over the year. Average weekly earnings in manufacturing were approximately $422.00 during January 1987.

Prepared in cooperation with the Bureau of Labor Statistics and the Employment and Training Administration of the U.S. Department of Labor by the Employment Data and Research Division, Estimates Group, P.O. Box 942880, Sacramento, CA 94280-0001.

HIGHLIGHTS California's seasonally adjusted unemployment rate for March was 6.0 percent, down from 6.2 percent in February 1987. A year ago, in March 1986, the rate was 6.9 percent. During March in California, seasonally adjusted employment increased by 54,000 over the month while unemployment decreased by 25,000. The national civilian seasonally adjusted unemployment rate for March 1987 was 6.6 percent, down from the 6.7 percent rate of the past three months.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 79,700 from 11,417,500 in February 1987 to 11,497,200 in March 1987. The largest gains in employment were in the services and trade sectors as employment increased by 28,000 and 18,300, respectively. Mining was the only major sector which lost jobs in March, experiencing a 17.2 percent employment decline over the year. Because of the continuing dry weather, employment in the construction industry has increased more than seasonally expected. Since March 1986, total wage and salary employment has increased by 365,300 -- a gain of 3.3 percent over the year. Average weekly earnings in manufacturing were $424.80 during February 1987.

HIGHLIGHTS California's seasonally adjusted unemployment rate for April was 5.8 percent, down 0.2 percent from March 1987. This is the lowest rate in over 10 years. A year ago, in April 1986, the rate was 6.8 percent. Seasonally adjusted employment was 12,959,000, up by 126,000 jobs over the month, while unemployment was 802,000, down by 20,000. The national civilian seasonally adjusted unemployment rate dropped by three-tenths of a percent to 6.3 percent.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 43,800 from 11,498,600 in March 1987 to 11,542,400 in April 1987. The largest gain in employment was in the construction sector. Seventy-five percent of the growth in this sector occurred in heavy construction and special trade contracting. Reflecting California's continuing service industry growth, there was a month-to-month increase of 10,800 jobs in this sector. The largest non-seasonally adjusted increases occurred in amusement and recreation services, followed by business services. Average weekly earnings in manufacturing were $432.68 during March 1987.

HIGHLIGHTS California's seasonally adjusted unemployment rate for May 1987 was 6.1 percent, up three tenths of a percent from the 5.8 percent in April 1987. A year ago, in May 1986, the rate was 6.7 percent. The rise in the seasonally adjusted rate reflects a higher than normal increase in new entrants to the labor force in search of summer employment. During May 1987 in California, seasonally adjusted employment was 13,070,000, up 111,000 over the month. Unemployment rose by 45,000. The number of job losers went down over 9.0 percent to 393,600 from 433,300 in April. The number of job leavers went up nearly 11 percent from 78,600 in April 1987 to 87,200 during May. The national civilian seasonally adjusted unemployment rate for May 1987 was 6.3 percent, unchanged from the previous month.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 66,700 jobs from 11,541,600 in April 1987 to 11,608,300 in May 1987. The largest increase in employment was in the wholesale and retail trade sector with retail trade generating approximately 25 percent of the total growth in employment. Moderate job growth continued in the construction, services and manufacturing sectors. The largest decline in jobs was in personal services, primarily due to seasonal employment patterns. Since May 1986, total wage and salary employment has increased by 352,900 jobs -- a gain of 3.1 percent over the year. Average weekly earnings in manufacturing were $423.94 during April 1987, down slightly from the previous month.

HIGHLIGHTS California's seasonally adjusted unemployment rate for June 1987 was 5.5 percent, down dramatically from 6.1 percent in May 1987. A year ago, in June 1986, the rate was 6.6 percent. During June 1987 in California, seasonally adjusted employment declined by 81,000 over the month while unemployment also dropped by 94,000. The total civilian labor force shrunk by 175,000 to 13,742,000. The number of job losers was down slightly from 393,600 in May to 345,000 in June. Somewhat unusual for this time of year, the number of new entrants was down in June by 1,900 over May. The national civilian seasonally adjusted unemployment rate for June 1987 was 6.1 percent, down from 6.3 last month.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 71,400, from 11,606,400 in May 1987, to 11,677,800 in June 1987. The largest gain in employment was in the wholesale and retail trade sector with retail trade generating more than a quarter of the total increase in wage and salary employment. The construction industry expanded by 13,800 jobs followed by services with 11,900 new jobs. As we enter the summer months, continued growth in the construction industry is expected. Services remains a high growth sector led by business services. Manufacturing continued to rebound generating 10,900 new jobs, the largest monthly gain this year. Since June 1986, total wage and salary employment has increased by 374,700 -- a gain of 3.3 percent over the year. Average weekly earnings in manufacturing were $432.68 during May 1987.

HIGHLIGHTS California's seasonally adjusted unemployment rate for July 1987 was 5.5 percent, unchanged from June of this year. A year ago, in July 1986, the rate was 7.0 percent. During July 1987 in California, seasonally adjusted employment increased by 75,000 over the month. Unemployment increased slightly from 753,000 in June to 755,000 in July. The labor force expanded by 77,000 to 13,819,000. The national civilian seasonally adjusted unemployment rate for July 1987 was 6.0 percent, down slightly from 6.1 percent last month.

Total nonagricultural wage and salary employment, not seasonally adjusted, decreased by 82,900, from 11,671,800 in June 1987 to 11,588,900 in July 1987. The largest decrease in employment was in the government sector with employment dropping by 112,000 jobs or 5.9 percent. Employment declines also occurred in agriculture and services. These adjustments are seasonally expected. The drop in government employment primarily reflects summer reductions in public school employment. The largest increase in employment was in wholesale and retail trade generating 10,800 new jobs. Job growth also occurred in manufacturing, construction, finance, insurance and real estate, and mining. The growth in manufacturing was approximately equal to seasonal expectations. Since July 1986, total wage and salary employment has increased by 353,300--a gain of 3.1 percent over the year. Average weekly earnings in manufacturing were $437.94 during June 1987.

HIGHLIGHTS California's seasonally adjusted unemployment rate for August 1987 was 5.4 percent, down slightly from the 5.5 percent in July of this year. A year ago, in August 1986, the rate was 6.6 percent. During August 1987 in California, seasonally adjusted employment declined slightly to 13,036,000 compared to 13,064,000 last month. Unemployment dropped by 16,000 to 739,000. The civilian labor force declined to 13,755,000 -- a drop of 44,000. The national civilian seasonally adjusted unemployment rate for August 1987 was unchanged since July at 6.0 percent.

Total nonagricultural wage and salary employment, not seasonally adjusted, increased by 33,100 jobs from 11,597,700 in July 1987 to 11,630,800 in August 1987. Agriculture generated 18,300 new jobs, about what was expected seasonally. Reflecting this increased activity, the preserved fruits and vegetables industry added 16,200 new jobs, the majority of the 24,900 new jobs in manufacturing. Wholesale and retail trade generated 13,500 jobs, with almost 76 percent in the retail trade category. Services gained 11,700 jobs, led by business services with 6,600 new workers. The largest decrease in jobs occurred in State and Local government -- down 30,700 jobs in August. Education accounts for most of this decline with a loss of 29,200 jobs. Since August 1986 total wage and salary employment has increased by 378,500 jobs -- a gain of 3.4 percent over the year.
